savot≡x **DeepL CONNECTOR**

Translation management using the world's best machine translation - DeepL

A CENSHARE **INTEGRATION**

With the DeepL Connector from Savotex,

you can have your content translated automatically from censhare in a matter of seconds - regardless of whether it's product information, thousands of product texts or entire Office documents.

At the same time, you always retain control over the translation process.

In addition, the internal censhare translation memory can be synchronized and expanded, so that additional benefits can be derived from the translations.

What is DeepL?

DeepL is a deep learning company that develops artificial intelligence systems for languages.

Unlike other services, DeepL's neural networks can detect even the smallest nuances and reflect them in the translation.

Not only does DeepL achieve record results in scientific benchmarks, but in blind tests translators also prefer the DeepL's results three times more often than those of the competition.

Alignment and synchronization with the existing censhare Translation Memory System®

TRANSLATION MANAGEMENT

 ∞

TRANSLATION MANAGEMENT IN CENSHARE

Supports all languages and regions through the censhare standard user interface for translation of all content and metadata.

- XML and MS Office documents® (.docx/.pptx/.txt)
- Translates content and metadata
- Automatic segment translation for regional content
- Matching of the translation request with existing content in the censhare Translation Memory System[®].
- Quick and easy installation of the DeepL module in censhare
- Modular system for configuring translations
- Central workflow management through censhare

Customers thus benefit from even better translation quality, greater individualization of translations and the strictest requirements for the protection of translated data.

- DeepL currently enables translation into 552 possible combinations, with more languages being added on an ongoing basis.
- Exceptionally high quality through machine translation
- Integrated, high-performance JSON-based REST API interface
- Unlimited text translations
- Translation of entire documentsHighest data security
- Transparent cost and character control

ADVANTAGES

Create and manage

your content as usual in censhare

Alignment of the content

with the existing translations of the censhare Translation Memory System

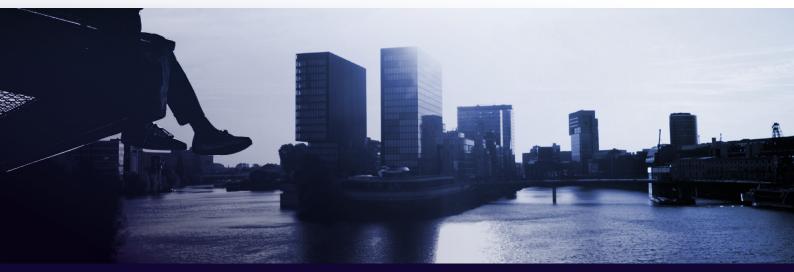

Automated Content Translation for regions and target groups

The world's best machine translation

thanks to neural networks and Artifical Intelligence

Maximum data security

through state-of-the-art encryption technologies and guaranteed data erasure
