rethink digitalization.

## ChatGPT Connector

**The future is now! Benefit from the game changer artificial intelligence - seamlessly integrated into censhare.**

With the ChatGPT Connector, the usage of artificial intelligence is possible directly in the censhare XML content editor without any background knowledge.

For a brainstorming a grammar check or for structuring a text, your personal AI assistant is now available to you via ChatGPT.

Benefit today from the integration of artificial intelligence into your daily work. We are happy to advise you!

P.S. You can already get a first impression of the possibilities from our AI expert in the following short [video](#).

### 🧠 Automatic product text creation

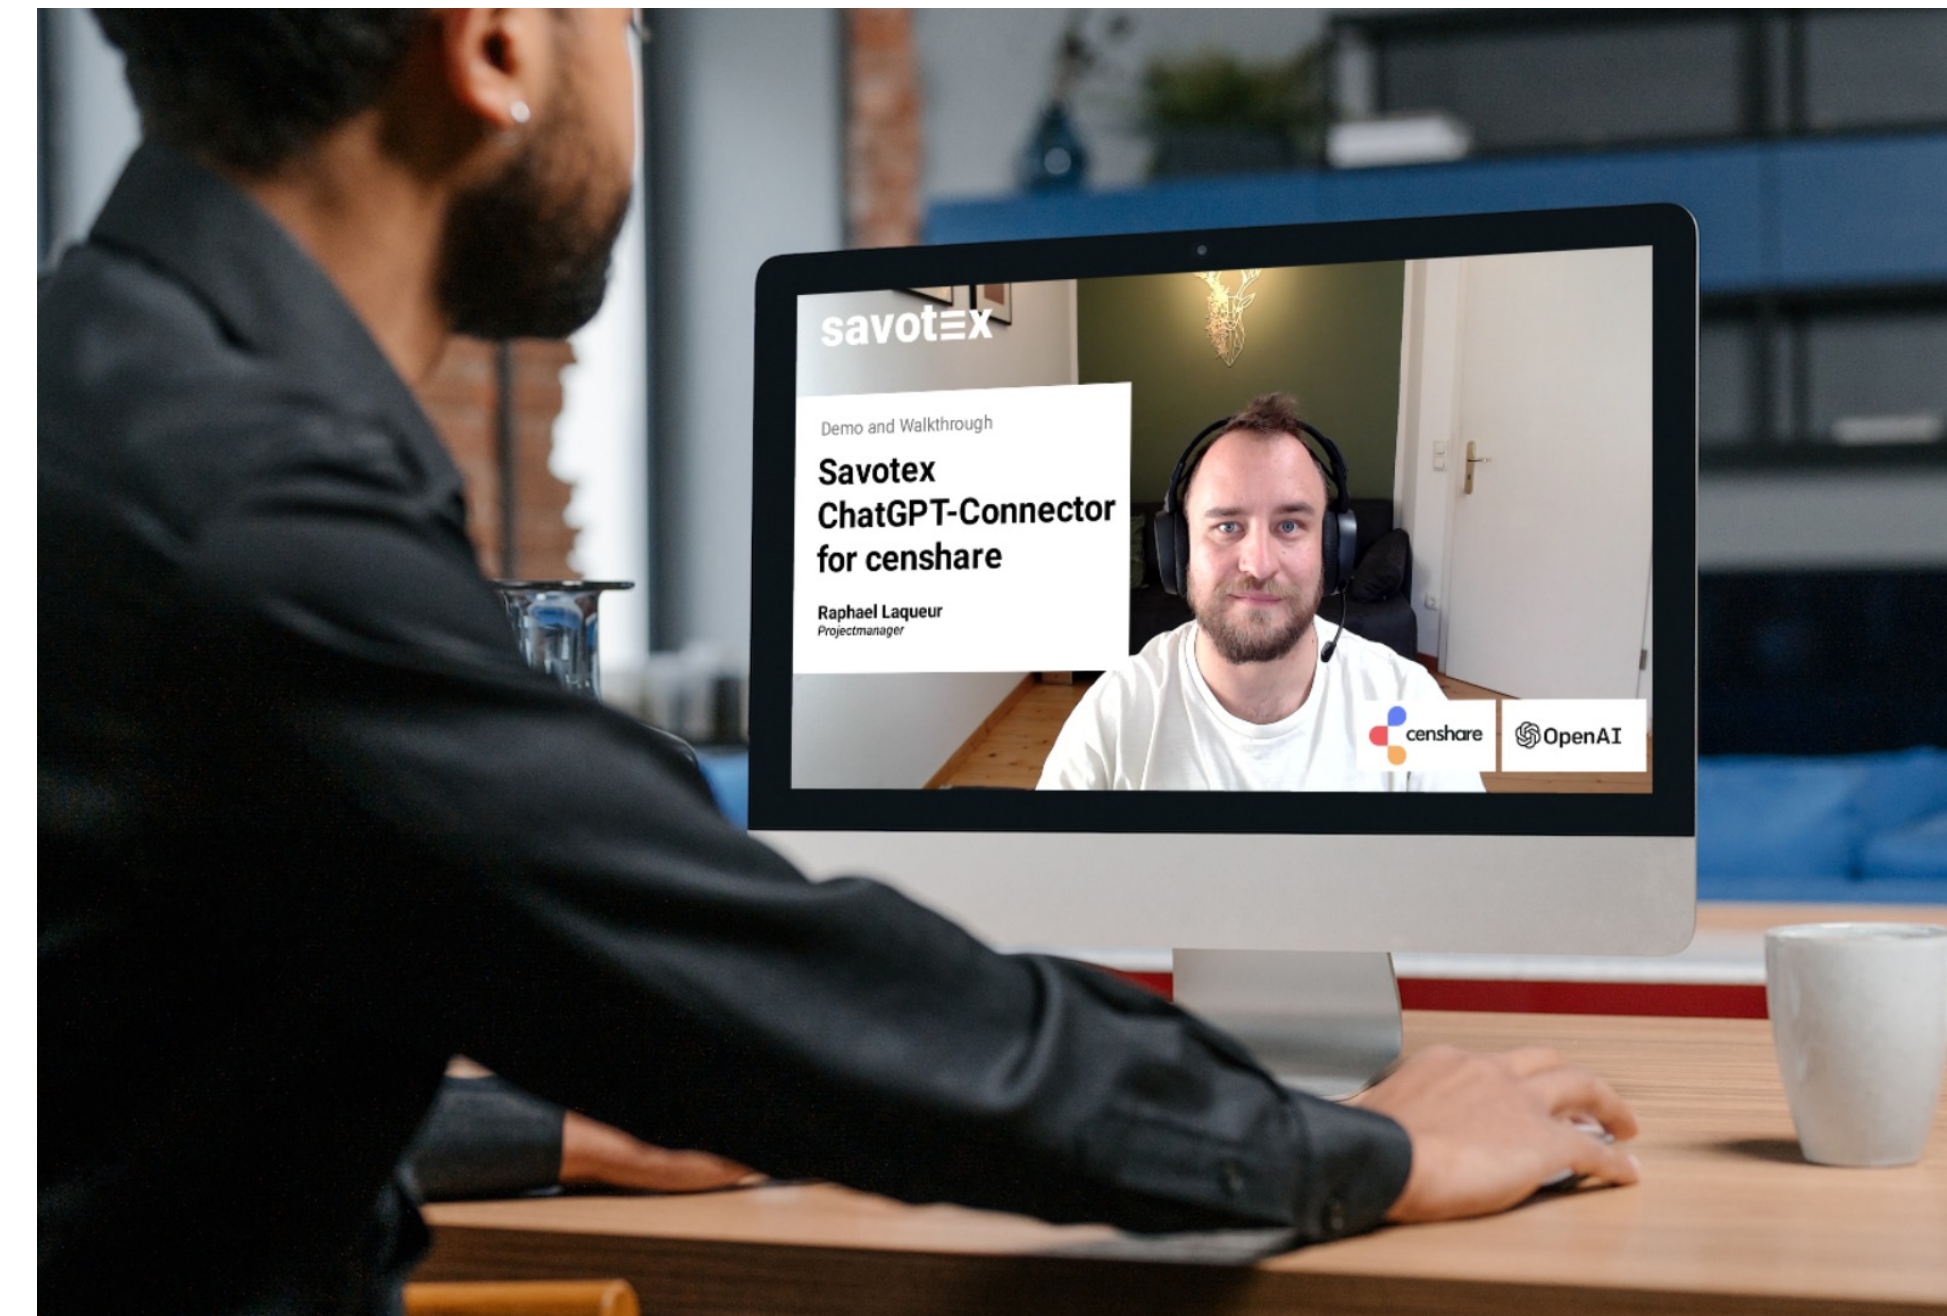

Based on a defined set of rules, product features are transferred to ChatGPT for automatic text generation. The results are adequate and relevant product texts. Without cost-intensive project preparation or training of a language model.

### 💡 Source for inspiration and information

ChatGPT supports users in their editorial work directly in censhare. Research or article suggestions on a topic are also possible, as well as the structuring or summarizing of existing articles.

### 🔍 Content Analyzation, Categorization & Transformation

For existing content, ChatGPT generates helpful keywords or optimizes SEO in the blink of an eye. Even the shortening of texts, summaries, adjustments of the tonality for target groups or the conversion into easy language is done at the push of a button.

## Interested?

**We are looking forward to hearing from you**
